

FORTRESS V3

Your Options Trading Command Centre

• IBKR LIVE

• QUANTDATA MCP

• 19 TICKERS

One dashboard. Live institutional data. Automated decisions.

Built on QuantData · IBKR · Python · React

Most traders drown in tabs — Fortress eliminates the noise

The old way

- ❌ Check IBKR for positions & Greeks → 10 min
- ❌ Open QuantData for GEX & dark pool → 10 min
- ❌ Scan 19 tickers for IV rank manually → 20 min
- ❌ Cross-reference earnings calendars → 10 min
- ❌ Decide what to trade with no regime context → ∞

50+ minutes of manual work — every single morning

FORTRESS

All of the above —
automated. 60 seconds.

• IBKR LIVE

• QUANTDATA MCP

• 19 TICKERS

"Professional desks have systems. Individual traders have browser tabs. Fortress closes that gap."

Every trade decision flows through four automated layers

LAYER 1
01

MACRO REGIME GATE

SPY GEX + Dark Pool + Net Drift → Regime Score (-5 to +5)

⚠ NO ENTRIES IN BEARISH REGIME

LAYER 2
02

MARKET INTELLIGENCE

Per-ticker GEX walls, DP floors, order flow → Directional Bias

19 TICKERS · 60s REFRESH

LAYER 3
03

POSITION EVALUATION

Live IBKR Greeks, concentration limits, DTE triage → Alerts

Δ · Θ · DTE · CONCENTRATION

LAYER 4
04

PRIORITY ORDERS

Synthesised action list → URGENT / ENTRY / ROLL / EXIT

ONE CLICK TO ACT

Fortress fuses institutional-grade data no retail terminal offers

IBKR TWS API

Live positions & Greeks (Δ , Γ , Θ , V)
Net Liq, Excess Liquidity, Daily P&L
Account margin data
Synced every 60 seconds

LIVE • 60s POLL

QUANTDATA REST API + MCP

GEX Call/Put Walls (gamma pinning zones)
Dark Pool Floor & Ceiling
Net Drift (directional order flow)
IV Rank per ticker

INSTITUTIONAL FLOW • 19 TICKERS

yFINANCE

Price history & OHLCV
50 SMA / 200 SMA
52-week high
Earnings dates

PRICE & TECHNICALS

ALL THREE STREAMS SYNTHESISED AUTOMATICALLY — YOU SEE THE CONCLUSION, NOT THE RAW DATA

One click generates a prioritised action list for the entire day

The Morning Trade Report auto-classifies every signal

URGENT STOP-LOSS	Position breached risk threshold – act now	2
NEW_ENTRY	IVR $\geq$ 50, regime green, earnings safe	16
ADD_TO_POSITION	Existing ticker with room to scale	3
EXIT	Profit target hit or thesis invalidated	3
ROLL	DTE $\leq$ 21d – time to roll forward	0

Every row
clickable

Expand GEX
context

Analyse in
one click

No manual scanning. No tab
switching. No guesswork.

TOOLTIPS ON EVERY METRIC

PER-CARD REFRESH

Directional bias synthesised from GEX exposure, dark pool notional, and net order flow drift — updated every 60 seconds.

The IV Rank Screener Surfaces Every Entry Opportunity Across the Full Universe

SIGNAL FIRES WHEN:

- ✓ IV Rank ≥ 50 (elevated premium — sell side favoured)
- ✓ IV – HV Spread $\geq 5pp$ (IV rich vs realised vol)
- ✓ Regime Score > 0 (macro not bearish)
- ✓ Earnings ≥ 21 days away (no earnings risk)

Fortress Uses QuantData's MCP Server for Programmatic Institutional Data Access

DATA FLOW

No deprecated tool/OPTIONS_* IDs · Rate-limit-aware · 400/401/403 guarded

WHAT MCP UNLOCKS

- ✓ Widget UUID-based REST endpoints — stable, not deprecated
- ✓ GEX exposure by strike, dark pool levels, order flow, IV rank
- ✓ Fully programmatic — no manual browser interaction
- ✓ Credentials managed from Settings UI (auth_token + cookie)
- ✓ Writes to both dashboard config and MCP config simultaneously

```
POST /api/settings/quantdata-credentials
{
  "auth_token": "Bearer eyJ...",
  "cookie": "session=..."
}
→ Updates VPS MCP config + dashboard config
```

Every feature is accessible programmatically via the Fortress REST API

Bearer-token authenticated · The frontend is just one consumer

API ENDPOINTS BEARER TOKEN AUTH

GET	/api/briefing	Morning brief + prioritised action list
GET	/api/candidates	IV rank screener results – all 19 tickers
GET	/api/market-intelligence?ticker=X	GEX, DP, drift, regime score per ticker
GET	/api/positions	Live IBKR positions with Greeks
GET	/api/alerts	Active stop-loss, concentration, DTE alerts
GET	/api/ibkr/preview	Account summary – Net Liq, P&L, margin
POST	/api/settings/quantdata-credentials	Update QuantData auth_token + cookie
GET	/api/manage/roll_all	Roll evaluation for all positions
GET	/api/manage/stop_loss_all	Stop-loss check for all positions

The frontend is just one consumer. Any script, bot, or external tool can call these endpoints directly.

Every risk rule is a dial — tune Fortress to your exact strategy

9 CONFIGURABLE PARAMETERS

PARAMETER	DEFAULT	WHAT IT CONTROLS
Delta Alert Threshold	0.30	Short leg alert when $ \Delta \geq$ this
Roll Window (DTE)	21d	ROLL signal fires at DTE $\leq$ this
Max Single-Name Conc.	20% NL	Alert + entry lock above this
Max Sector Conc.	40% NL	Sector-level risk cap
Min Premium Credit	\$50	Close short leg below this
Regime Entry Threshold	0	No new entries when score $\leq$ this
IV Rank Entry Threshold	50	Candidates signal at IVR $\geq$ this
IV/HV Spread Threshold	5pp	Min IV premium over realised vol
Stop-Loss: 200-SMA	ON	Close if underlying breaks 200 SMA

5 BUILT-IN TRADER PRESETS

Income Seeker — conservative income
Covered Calls, CSPs, Wheel

Strategic Speculator — aggressive growth
Long calls/puts, vertical spreads

Volatility Trader — moderate income
Straddles, Iron Condors, Butterflies

Portfolio Protector — conservative protection
Collars, Protective Puts, SPY hedges

PMCC Income ★ ACTIVE — moderate income
Deep ITM LEAPS + short OTM calls

All parameters stored in browser localStorage. Export/Import for backup. Reset to Defaults available.

Production-grade stack, self-hosted, zero subscription fees beyond data

No cloud lock-in. Full control over data, logic,
and infrastructure.
